Tree Maintenance Program

Working to keep your power flowing

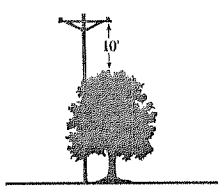
(Important information inside)

In the coming weeks, Con Edison contractors will be trimming trees in your neighborhood. Tree limb interference and fallen tree limbs are the leading causes of power outages during storms. This work is necessary to ensure safe and reliable electric service for you and your neighbors.

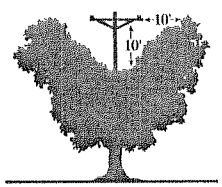
We may or may not need to trim trees along the streets around your home. Our inspectors will be in your neighborhood to assess whether trimming is required. If trimming is necessary, we hire professional, qualified tree trimmers who follow the International Society of Arboriculture pruning guidelines. We make very effort to minimize the impact on the appearance, health, and stress to trees. You may be contacted by one of our notification foresters to discuss this work.

When it comes to planting trees, it's important to pick the right tree for the right place. You need to consider how large a tree will be when fully grown. That's why we've prepared a Tree Maintenance Guide that gives you tips about proper tree selection, planting and pruning. This information is on line at www.coned.com or call 1-800-75-CONED to request a copy. For more information about work in your neighborhood call or e-mail us at BWlineclearance@coned.com

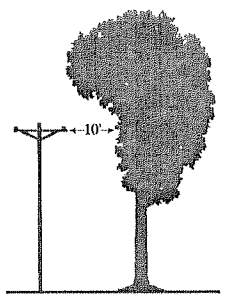
We perform tree trimming to create minimum distances between electric lines and the surrounding trees.



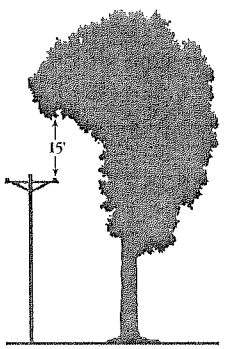
Ten feet underneath.



Ten feet underneath or sides.



Ten feet on the side.



Fifteen feet above.
